

THICKNESS X WIDTH FACE COVER: 22x175 mm WOOD SPECIE: Spruce (EcoThermo)

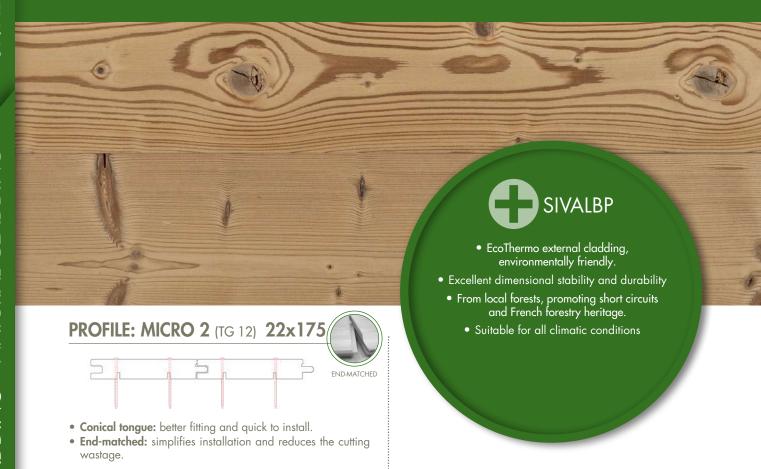

PROFILE: Micro 2 (TG 12)

BOARD: Brushed solid wood

Ref. C07

#### **CHARACTERISTICS**

- External EcoThermo solid wood board.
- Micro 2 TG 12 mm profile , traditionally used in mountain areas, end-matched: facilitates the fitting and reduces the cutting wastage.
- Brushed surface: it gives an optimal and texture surface; it brings out the natural grain of wood.
- Thermostabilised boards will clear up in the first weeks under the effect of UV and according to exposure and building's architecture. They will then evolve towards a natural graying.
- The Sivalbp-Authentic range offers a range of unfinished products: the natural wood aesthetics.

#### SPECIFIC RECOMMENDATIONS

Product not ruled bu the DTU 41.2

Product recommended for altitudes above 1000 m and with medium to high protection. Not suitable for architectures without eaves.

# **WOOD SPECIE: SPRUCE**

(ECOTHERMO)

Spruce: French timber, PEFC certified (PEFC/10-31-1593). Singularities and knots: slow-growing essence; rustic, small to medium knots; clear wood.

Eco

WOOD SPECIE	THERMAL PROCESS	DURABILITY	TECHNICAL PROPERTIES			
Spruce  Geographical area: France Quality: A/B choice NF EN 1451	Thermostabilisation Ecological process, environmentally friendly and chemical free. It consists in moisturising and heating the	Use class:	Behavioural fire restrictions	Thermal characteristics according to NF EN 12 524	Water vapour permeability according to NF EN 12 524	
PEFC certified	and greatly reduces the shrinkage		EUROCLASSE D-s2, d0 for reaction to fire (according to 14915 NF EN standard)	Thermal resistance R	Water vapour resistance: 66 µ	
Carbon footprint: 6.29 kg CO <sub>2</sub> eq./m <sup>2</sup> (module D excluded)*	phenomenon. The wood acquires an even, brown colour all the way through and neutralizes resin exudation.		Combustible mass in MJ/m²: 164	in m <sup>2</sup> . K/W: 0,12	Average density: 475 kg/m³ to 12% wood moisture

PREPARATION FINISH	SHADE	THICKNESS X WIDTH FACE COVER IN MM		BOARD	LENGTHS (M)* (according to availability)	FITTING	PACKAGING					
Brushed solid wood	without finish	22x1	175 mm	Planed solid wood	4.00	2 nails (find installation advice below)	Packs x boards/pack: 48x4					

<sup>\*</sup>For solid wood boards with end-matched, the effective length is equal to the standard supply length invoiced minus 30 millimeters.

## **INSTALLATION ADVICES**

To ensure the products are correctly installed, the rules laid out in the French code of practice DTU 41.2 for external cladding, and our Technical Guide, should be observed.

- Store the boards in a dry place, sheltered from the elements and ventilated.
- Can be fitted horizontally or vertically (mandatory double battening for vertical installation).
- Cladding must be fixed on batten with a minimum of 27 mm thickness (32 mm for UK).
- They must be attached at a minimum of 40 cm and a maximum of 65 cm apart (60 cm for UK).
- A waterproof membrane satisfying the standard must be installed (except for walls which are already watertight, solid concrete walls).
- Mandatory air gap behind Sivalbp cladding to ensure a good ventilation. The air outlets must be at the base and the top of the cladding elevation.
- Ensure a minimum of 20 cm above ground clearance.
- Assembly by interlocking (end-matched on the 4 sides).
- Fastening with **stainless steel screws or stainless steel tips**, twisted or ringed 2 nails, 1 visible nail in the upper part of the board, locked in the upper third of the board + 1 visible nail in the lower part of the board, locked at least 15 mm from the groove.
- The head of the nails or screws must not penetrate further than 1 mm into the boards.

## **MAINTENANCE**

- Wood is a natural and not homogeneous material which can contain some particularities. Boards contain knots of various, for the greater part healthy dimaters and members.
- Living material, maintenance free, wood without finish can in the time present molds of surface, without compromising the durability of wood.
- Regarding the sustainability of aspect, it is underlined that woden species not dressed in finish will turn natural grey over time

# **GENERAL REMARK**

Wood is a natural and heterogeneous material, subject to varying degrees of dimensional variations, depending on humidity and climatic conditions. These factors can cause, among others, cracking, resin exudation, shrinkage and curling.
